PREFACE

Ever since March 2020, our country has had a critical and demanding experience emerging from the COVID-19 outbreak. NKUA was among the first institutions, in the country, which were most prepared to fight the pandemic, as incoming news from neighbouring countries anticipated the crisis.

NKUA's contribution to the national effort has been constant and significant. The Institution has offered, and continues to do so, specialized action, on all levels of fighting the pandemic, shielding the health of all academic community members, at the same time.

The University's main concern during this period has been to adequately and uninterruptedly cater for knowledge dissemination, cutting-edge research, including COVID-19 related issues, for producing new knowledge and providing high level health services to society and the State. This has often been highly demanding, in the unprecedented situations we have experienced, especially in NKUA's Covid-19 Clinics and in the Intensive Care Units, which have managed a significant part of the Public Health System workload.

The present edition briefly summarizes NKUA's agonizing effort to respond to the tasks – especially of the medical and nursing staff – which is hard to fully record in a document. It also summarizes the struggle of hospitalized patients, especially in intensive care units of the University clinics.

Professor Meletios-Athanasios Dimopoulos
Rector of NKUA

MEASURES, DECISIONS AND ACTION THE NKUA ADMINISTRATION TOOK IN THE COVID-19 PANDEMIC CRISIS

MARCH 2020 – FEBRUARY 2021

The National and Kapodistrian University of Athens met the needs of the crucial situation quite early, by designing and implementing an action plan and a blueprint for supporting remote teaching and working, using the advanced and constantly developing technological infrastructure of the Institution. The NKUA Centre of Network Management (Κ.ΑΕΙ.ΔΙ.) has been a strong pillar in this endeavour contributing to high quality academic education and administrative support.

NKUA made sure that all Administrative Departments and Units adjusted to the new conditions and operated effectively to the full. It designed and implemented a weekly programme of measures for prohibiting spread of COVID-19. The programme suggested that administrative personnel would appear on site, on rotation, and with the necessary precautions for facilitating the workflow and protecting themselves and their colleagues working remotely.

Vulnerable groups of administrative personnel, those on leave of absence for special purposes or personnel on other types of leave were excluded from the programme of measures. On a par, the Financial Management Unit (Μ.Ο.Δ.Υ.) of the Special Account Research Grant (Ε.Λ.Κ.Ε.) operated with part of its personnel physically present, while the rest of the employees, who were not on a special purpose leave or on a high risk leave or on a special leave or on parental leave, worked remotely (20% of the overall work force).

The Financial Management Unit (Μ.Ο.Δ.Υ.) made every effort to respond to the task in every way, on a par with broadening and updating its electronic services.

All Bodies of the Institution have regularly assembled through tele-conferencing.

The National and Kapodistrian University of Athens, in the critical period it goes through, takes all necessary measures for supporting the educational and research potential of the academic community, ensuring a smooth operation of all projects, as far as possible.

Our country is going through a very critical period due to the SARS-Cov-2 (COVID-19) pandemic. **NKUA constantly supports the national effort and will continue to specialize in a variety of actions against the COVID-19 pandemic.**

In particular, it took all necessary measures to deal with emergencies and to accelerate and upgrade the work of NKUA colleagues whose Clinics and Laboratories play an important role in the treatment of the coronavirus, as their operation crucially supports the National Health System.

Ever since the application of the restrictive measures, the institution has formed the following Committees:

1. **Supreme Committee for Addressing COVID-19-Related Issues at NKUA**, it comprises the Rector, the Vice-Rectors, the Head of the Property Development and Management Company of NKUA, the Director of the Technical Services (TYPIA), the Head of the Centre of Network Management (Κ.ΛΕΙ.ΔΙ.). Deans and heads of various units may be invited to participate in the Committee, if necessary.
2. **Committee for Organizing and Supporting Remote Teaching and Working**, it comprises the Vice-Rector of Research and Lifelong Learning, the Vice-Rector for Academic and Student Affairs, the Vice-Rector of Administrative Affairs, Professors L. Merakos and T. Sfikopoulos, the Director of the Administration and the Head of the Centre of Network Management (Κ.ΛΕΙ.ΔΙ.).
3. **Health Affairs Committee for the entire period of protective measures**. It comprises the Vice-Rector of Administrative Affairs, the Dean of the School of Health Sciences, and the doctors who are employed at the Medical Centres of the University and the University Student Club. The Committee is responsible for cases of the personnel to whom remote work is mandatory due to their status as vulnerable group members or due to other health issues. The Committee decides on disinfection of the premises, when circumstances so require.
4. **NKUA's COVID-19 Steering Committee of the Academic year 2020-2021**, consisting of the Rector, the Vice-Rectors, Directors of University Clinics and Laboratories, Teaching and research staff, and the Director of Education and Research Unit.

Ever since the application of restrictive measures against the pandemic, the University of Athens has taken all appropriate actions to:

- keep the Institution premises safe;
- inform staff, students, and patients;
- support operation of the Laboratories and Clinics of the Departments of Medicine, the School of Dentistry, the School of Nursing, and the Department of Pharmacy by protective measures, given the relevance of their specialization.

Right after the implementation of the restrictive measures, all premises were disinfected and sanitized according to the protective instructions against COVID-19, with the protective steps still being implemented.

The Institution has approximately distributed:

- more than 3,000 items of 250ml antiseptics
- 234,000 surgical masks
- more than 100,000 gloves
- 160,000 hand towels

Furthermore, the Institution installed wall-mounted top-up dispensers and soap holders, mask and glove waste buckets and printed signs and instructions at key points. On a par, NKUA developed a network of volunteer teaching and research staff, and students, for constructing face shields with 3D printing. More than 2,000 items have been distributed until now.

The Department of Dentistry, assisted by the Dean of School of Health Sciences, has placed plastic barrier shields in secretariats, the library and in some postgraduate clinics student lockers in laboratory areas. All staff members, postgraduate and undergraduate students also received personal protective equipment (face shields). All clinics have been harmonized with the directives of the Hellenic National Public Health Organization (E.O.Δ.Υ.) in reference to whether they cater for air quality control. Specifically, the Technical Services of NKUA (ΤΥΠΙΑ) introduced a series of modifications to already existing equipment for monitoring indoor air quality or created new systems of air recycling, installed A/C's etc.

NKUA's Administration bought 20 air purifiers with HEPA absorption filters (high efficiency particulate Air) which were placed in various clinics, depending on square footage (4 units/150 m²) and 6 new powerful surgical aspirators which the Administration of the School installed in units of the ΚΣΑΑ (Overall Patient Treatment) Clinics.

An accelerated supply procedure provided informatics equipment, meeting the urgent needs of NKUA's Administration Units, including portable workstations and accompanying equipment to support remote working and tele-conferencing, in the new conditions.

Furthermore, funding the supply of a Real Time Thermal Circulator (Real Time PCR Cycler with 384 wells) has contributed to the important diagnostic aim of conducting SARS-Cov-2 (COVID-19) laboratory research by the Laboratory of Microbiology of the Medical School, NKUA.

For supporting all intensive care units in COVID-19 Referral Hospitals, NKUA's Special Account for Research Grant (E.Λ.K.E.) created a project covering the employment cost of three (3) academic scholarships, in the following NKUA Clinics: Intensive Care Unit of the A' Pulmonary Clinic ("Sotiria" Hospital), A' Intensive Care Unit ("Evangelismos" Hospital), B' Intensive Care Unit ("Attikon" Hospital).

On a par, NKUA made a decision to cover employment expenses for

- an academic scholarship, for a specific period of time, for the Professors of Infectious Diseases,
- an academic scholarship for the needs of the Laboratory of Hygiene, Epidemiology and Medical Statistics, as well as
- another one for scientifically supporting B' Infection Clinic, which operates within the Γ' Pathological Clinic of NKUA at Sotiria Hospital.

With the assistance of the Property Development and Management Company of NKUA (ΕΑΔΠΠΑ), the Department of Chemistry was supplied with chemical reagents and prepared a large quantity of disinfectant for the needs of the academic units of NKUA.

Meanwhile, through its digital platform, the Property Development and Management Company remotely processed print requests of graduates' parchments, doctoral theses, postgraduate dissertations and dissertations of undergraduate students.

NKUA also conducted a voluntary epidemiological study on NKUA members, regarding the presence of antibodies against the new coronavirus SARS-CoV-2 and offered a free laboratory test, on a voluntary basis, for NKUA staff, to detect Covid-19 infection, for facilitating employees and strengthening preventive measures.

NKUA uninterruptedly continues to supply materials and other necessary protective devices, according to E.O.Δ.Υ. instructions, for enabling all structures to operate safely and in particular the Laboratories and Clinics, as well as the Departments for safely running courses and conducting examinations, in agreement with the relevant decisions.

The Directorate of Education and Research of the Institution confirms that distance learning took place in most of the courses of the spring semester in all 42 Departments of our University, with all the synchronous and asynchronous means available.

The following digital tools (synchronous and asynchronous distance education) were provided to all members of the University community, along with the assistance of NKUA's Center of Network Management (Κ.ΑΕΙ.ΔΙ.)

- Uploading course materials on the e-Class platform and video recorded Lectures on the Delos platform of the Institution.
- Materials on the e-Class platform + remote teaching from NKUA classrooms with cameras, via the Delos platform.
- Materials on e-Class + broadcasting lectures via PC (using the YouTube Live service).
- Materials on e-Class + Synchronous remote teaching via the platforms:
 - Big Blue Button (the built-in e-Class teleconferencing service),
 - Microsoft Skype for Business,
 - Google Meet,
 - Cisco Webex Meetings,
 - ZOOM

A. Undergraduate Programmes

Out of 1,762 undergraduate courses of the Departments and Schools of the Institution (in the Spring 2019-2020 and Fall semester 2020-2021):

- 1,500 courses (86% of the total number of courses) were fully taught remotely.
- 141 courses (8%) were partially taught remotely. These courses comprise a theoretical component which was taught remotely, and practical or clinical exercises, which will be completed when the emergency measures applicable to the educational process at university will be lifted.
- 121 courses (about 6%) were not taught due to their nature, which requires physical presence of teachers and students, such as internships, courses requiring special laboratory equipment, clinical exercises, field training etc.

In the Fall semester 2020-2021 only last year students conducted their clinical exercises.

B. Postgraduate Programmes

Out of the 1,583 postgraduate courses in the spring semester for the Schools and of the corresponding Fall semester courses of academic year 2020-2021 of the Schools and Departments of the Institution:

- 1,361 courses were fully taught remotely, representing 86% of the total courses.
- 39 courses (about 3%) were partially taught remotely. These courses, like the undergraduate ones, comprise a theoretical component which can be taught remotely, and laboratory or clinical exercises, to be completed when the emergency measures applicable to the educational process at university will be lifted.
- 183 courses (about 11%), were not taught due to their nature, which requires physical presence of instructors and students, such as internships, courses requiring specific laboratory equipment, clinical exercises and field training or are part of some Interinstitutional Postgraduate Programme and remote teaching from a foreign University which is pending.

According to the relevant Ministerial Decisions and the 27 May 2020 Senate Decision, the spring semester exams 2019-2020 took place, with the following methods or a combination of them:

- a) Written assignment or/and exercises
- b) Laboratory exercises
- c) Written examination with physical presence
- d) Written or oral remote examining

NKUA conformed to the necessary sanitary rules, in written and oral examinations with physical presence, for safeguarding students' and instructors' health. Instructors took special care for students belonging to vulnerable groups and for disabled students or students with special educational needs, who, after a documented request, were examined in alternative ways, such as remote written or oral exams.

The "Data Protection Policy for remote written or oral examining" was observed, as approved by the Senate.

The 2020-2021 fall semester exams went smoothly with remote written or oral examining, in agreement with the relevant ministerial decision and the decision of the Senate.

The above data suggest that all teaching and research staff of the Institution responded to the current requirements with unparalleled conscientiousness, meeting the academic needs of the Institution with the most effective measures, under extremely difficult conditions and with time constraints.

Within a very short period of time, the teaching staff adapted and/or developed material for remote teaching as far as possible, and compiled a teaching programme, dividing the large "audiences" – which in some cases reached numbers as high as three digits – into smaller groups (sections), which created additional workload for the teaching staff.

The high participation of students in distance learning indicates the success not only of the work that the teaching staff has done, given the circumstances of the pandemic, but also that the University activated a mechanism which allowed completion of the spring semester.

Continuing the educational process was made possible thanks to the technical staff of the Institution who fully responded to the challenges and opportunities created by the internet globally, due to the coronavirus crisis. The technical staff solved difficult problems that arose and identified best practices; as a result, the system met the goals of the teaching staff, to a large extent.

Libraries have supported the educational and research practice of the University in the unprecedented and difficult circumstances we are experiencing.

NKUA managed to organize remote services within a short period of time. Returning books, registering for new books in EUDOXOS, remote submissions of MA and doctoral dissertations, uploading dissertations on Pergamos, preparing undergraduate graduations, creating and processing bibliographical records, enriching the Greek and English website of the Library, cooperating with the secretariats of the Departments, are only part of the work done either on site or remotely by the staff. The Institution also provided trial access to multiple databases for some time.

The employees at the Computer Centre of the Libraries provided continuous technical support. The "Ask a librarian" service was launched in some libraries with online communication with the public.

During the period of preventive measures for Covid-19, the National and Kapodistrian University of Athens fully implemented the processes of quality assurance and certification and the following tasks for the Hellenic Authority for Higher Education (EΘAAE).

More specifically:

1. The Quality Assurance Unit (ΜΟ.ΔΙ.Π) in collaboration with the relevant Departments, submitted nine Folders - Certification Proposals in May 11, 2020.

31 out of 32 proposals have already been submitted, of which the Hellenic Authority for Higher Education (EΘAAE, hereafter) has already completed the certification procedure for 12 out of them. The new Undergraduate Programmes which started in the academic year 2019-2020 would apply for a certification after completing another two academic years of operation.

2. Inventory and quality data about the Institution, the services, the Departments, Undergraduate, Postgraduate and Doctoral Programmes for the Academic Year 2018-2019 were submitted to the Integrated Information System of the Hellenic Authority for Higher Education (EΘAAE).
3. Implementation of distance certification procedures for Undergraduate Programmes by EΘAAE:
 - NKUA made a proposal to (EΘAAE) for applying remote cooperation methods in EΘAAE's certification processes of NKUA's undergraduate programmes.
 - The Hellenic Authority for Higher Education informed the Administration that it agrees and has been in their intention to organize the certification of study programmes by implementing online collaboration procedures with the members involved. The four departments to be included in the remote external evaluation and certification procedure, are the Department of Theatrical Studies, the Department of Mathematics, the Department of Music Studies and the Department of Education and Preschool Education.
 - Procedures were held successfully and HAHE officially announced certification of 3 out of 4 Undergraduate programmes of the National and Kapodistrian University of Athens (the decision for the 4th Department is expected).
 - These programmes were the first in Greece, which implemented and completed the certification procedure online, from June 15 until July 15, 2020.

The distance external assessment procedure and certification of another two undergraduate programmes was completed in the first half of October, namely of the De-

partment of Italian Language and Literature and of the Department of Physical Education and Sport Sciences.

Finally, the NKUA **Special Account Research Grant** (E.A.K.E.), following a Senate decision, implemented the project “Scholarships for theoretical sciences related to the repercussions of the coronavirus”, funded by E.A.K.E.’s fund reserves. The project aims at supporting research in various research areas which focus on the pandemic impact. The scholarship amounts to ten thousand euros (10,000€), 60% of which will be granted during the project and the rest 40% upon acceptance of deliverables.

NKUA'S MEDICAL SCHOOL CONTRIBUTION DURING THE COVID-19 PANDEMIC

MARCH 2020 - FEBRUARY 2021

From the very beginning, all personnel - teaching and researching staff, laboratory teaching staff, self-supporting teaching staff, technical laboratory specialists, researchers and administrative staff-of the clinics and laboratories of NKUA's Medical School took active part in fighting the pandemic, serving the Greek society and offering help in response to the clinical and laboratorial needs of Attiki. In particular, NKUA's following units are on the front line:

Clinics/ Laboratories	Hospital	Hospital Beds for COVID*
A' CLINIC OF PREPARATORY AND INTERNAL MEDICINE	LAIKO	120 beds
A' CLINIC OF INTERNAL MEDICINE		
PATHOLOGICAL PHYSIOLOGY		
B' CLINIC OF INTENSIVE CARE	ATTIKON	55 ICU beds
C' CLINIC OF PEDIATRICS		16 beds
D' CLINIC OF INTERNAL MEDICINE		251 beds
B' CLINIC OF PREPARATORY AND INTERNAL MEDICINE		
B' CLINIC OF PNEUMOLOGY		
C' CLINIC OF OBSTETRICS AND GYNAECOLOGY		
HOSPITAL "AGIA VARVARA"	WITH SUPPORT OF THE UNIVERSITY CLINICS OF ATTIKON HOSPITAL	58 beds
THERAPEUTIC CLINIC	ALEXANDRA	90 beds
A' CLINIC OF OBSTETRICS AND GYNAECOLOGY	ALEXANDRA	12 beds (with wards allocated for pathological cases)

Clinics/ Laboratories	Hospital	Hospital Beds for COVID*
C' CLINIC OF INTERNAL MEDICINE	SOTIRIA	25 beds
A' CLINIC Of PNEUMOLOGY	SOTIRIA	22 beds 17 ICU beds
A' CLINIC OF INTENSIVE CARE	EVAGGELISMOS	66 ICU beds
B' CLINIC OF PATHOLOGY	IPPOKRATEIO	143 beds
A' CLINIC OF PEDIATRICS	PAIDON-AGIA SOPHIA	50 beds
B' CLINIC OF PEDIATRICS	PAIDON- AGLAIA KYRIAKOU	20 beds
FORENSIC TOXICOLOGY LABORATORY	GOUDI	Necropsies
LABORATORY OF MICROBIOLOGY	GOUDI	Molecular diagnosis
HISTOLOGY AND EMBRYOLOGY LABORATORY	GOUDI	Molecular diagnosis
LABORATORY OF CLINIC MICROBIOLOGY	ATTIKON	Molecular diagnosis
LABORATORY OF HYGIENE, EPIDEMIOLOGY AND MEDICAL STATISTICS	GOUDI	Molecular diagnosis, data processing

** The number of hospital beds gradually increased according to the needs.*

During the first 12 months of the Covid-19 pandemic, the above clinics of NKUA have received and treated roughly one third of the intubated patients and more than half of the non-intubated patients. NKUA's Microbiology Laboratories were at the forefront of the fight against Covid-19, performing diagnostic tasks for hospitals and Healthcare Centres of a wider geographical area with molecular tests of clinic samples using the real-time RT-PCR method. Laboratories are equipped with high-tech clinical analysers – mostly from donations – analysing hundreds of thousands of medical samples, up to this day.

Furthermore, the State-assigned Committee of experts, from the beginning, consisted of experienced professionals with great contribution and expertise. **A large number of the experts belong to the teaching and research staff of NKUA and points of reference for the Committee's work are the Clinics and Laboratories of the oldest University in the country. It is a great honour for the National and Kapodistrian University of Athens, as well as an acknowledgement of its substantial and tangible contribution, to be participating in the Committee of experts with 13 of its members.**

Committee experts today are:

- HELENI GIAMARELLOU, Professor Emerita of Pathology, NKUA, President of the Hellenic Society of Chemotherapy.
- GEORGIOS DAIKOS, Professor Emeritus of Pathology and Infectious Diseases, NKUA.
- ANASTASIA KOTANIDOU, Professor of the Medical School of NKUA, Head of the 1st ICU Ward of the General Hospital "Evangelismos", President of the Hellenic Society of Intensive Care.
- PAGONA LAGIOU, Pathologist, Professor of Hygiene and Epidemiology at the School of Medicine, NKUA, Adjunct Professor of Epidemiology at Harvard University, USA.
- GKIKAS MAGIORKINIS, Assistant Professor at the School of Medicine NKUA, Laboratory of Hygiene & Epidemiology – Working Group in reviewing scientific data and advancements on the pandemic of the SARS COVID-19 virus.
- VASILIKI PAPAEVAGELOU, Professor of the School of Medicine, NKUA, Director of 3rd Pediatrics ward in Attikon University Hospital.
- DIMITRIOS PARASKEVIS, Associate Professor of Epidemiology and Preventive Medicine of the Medical School, NKUA, Laboratory of Hygiene, Epidemiology and Medical Statistics.
- GEORGIOS SAROGLU, Pathologist-Infectious Disease specialist, Professor Emeritus of Pathology of the Nursing Department of NKUA, Former President of KEELPNO (Centre of Management and Prevention of Disease).
- VASILIKI-ANASTASIA SYPSA, Associate Professor of Epidemiology and Medical Statistics of the School of Medicine, NKUA, Laboratory of Hygiene, Epidemiology and Medical Statistics.
- NIKOLAOS SYPSAS, Professor of Pathology, Physiology and Infectious Diseases at the School of Medicine, NKUA.
- ATHANASIOS TSAKRIS, Professor of Microbiology at the School of Medicine, NKUA, Director of Microbiology Laboratory, Vice Rector of NKUA.
- SOTIRIOS TSIODRAS, Professor of Medicine, NKUA – Attikon University Hospital. Pathologist – Infectious Diseases expert.
- MARIA TSOLIA, Professor of Pediatrics, Infectious Diseases of the School of Medicine, NKUA, Director of the 2nd Pediatrics Clinic, General Children's Hospital "AGLAIA KYRIAKOU".

NKUA's reference clinics fought the pandemic by bringing together special departments and, where appropriate, Intensive Care Units. In NKUA's reference clinics, there were high-flow oxygen delivery systems (High Flow Nasal Canula), for better support of the patients, in several beds with the potential of applying non-invasive mechanical ventilation. This type of equipment significantly contributes to fighting the pandemic on a global level. Also, ever since the first wave of the pandemic, our clinics actively participated in the early access programme to the antiviral drug Remdesivir, which was later approved for the treatment of the SARS-Cov-2 infection in hospitalized patients.

At the same time, providing care to patients who did not suffer from COVID-19 continued uninterrupted in the premises of NKUA clinics. It is worth noting that, for several of the clinics, the volume of medical work multiplied, as they undertook the corresponding work of other reference clinics.

In addition, by participating in the SARS-Cov-2GR Flagship Action, NKUA has carried out the development and application of domestic molecular and immunological diagnostic methods for fighting the pandemic of SARS-Cov-2.

In particular, it implemented the following works:

- Developing domestic molecular methods for detecting SARS-Cov-2. These are methods for identifying the genetic material of the virus, allowing detection of active virus infection. They are based on the RNA reverse transcription technique, followed by a polymerase chain reaction (PT-PCR). These methods are being applied daily for the testing of samples sent by Public (E.O.Δ.Y., NKUA, Municipalities, etc.) and Private Bodies.
- Developing domestic immunological detection methods for antibodies against SARS-Cov-2. These methods allow tracing protective antibodies produced by the body following SARS-Cov-2 infection and are based on the ELISA immunoassay technique. These methods are used to periodically test the immunization of infected or vaccinated individuals.
- Producing monoclonal antibodies against the SARS-CoV-2 virus. These antibodies were generated by applying genetic engineering and immunology principles and binding to different sites in the spike protein, through which the coronavirus enters the cells. At the diagnostic level, they were used for developing classical immunoassay, but mainly of the first Greek rapid detection test for SARS-CoV-2. In addition, these antibodies were used for research purposes and highlighted the importance of cellular aging in COVID-19 patients as well as the importance of antigenemia in the diagnosis of these patients. In addition to their diagnostic value, these antibodies can be administered after appropriate modification (techniques that make them compatible for human use) to COVID-19 patients, thus opening up a particularly important therapeutic potential for treating the infection.

The first molecular epidemiological study was carried out at the Personalized Genomics Unit of the Centre for New Biotechnology and Medical Precision (pMedGR) of the Medical School to investigate the spreading mode of SARS-CoV-2 and to assess the removal of travel restrictions due to the virus in Greece, in collaboration with organizations from Attiki, Thessalia, Thrace, Macedonia, USA, as well as the National Organization of Public Health (E.O.Δ.Υ.):

The study was based on the analysis of 389 full-length genome nucleotide sequences by the Next Generation Sequencing (NGS) method. The analysis also included globally sampled sequences (approximately 5,000) as reference sequences.

Based on cutting-edge methods in the fields of genomics, bioinformatics and molecular epidemiology, the study estimated the rates of imported infections in three time periods in our country: i) March (absence of restrictive measures on travel), ii) April-June (implementation of strict restrictions), and iii) July-September 2020 (restriction removal in combination with restrictive measures for controls at the entrance gates). Results showed that the imported strains of the virus during the summer had little effect on further spreading the virus in Attiki, which underlines the relative safety of conditional movement in a pandemic.

NKUA charted the diversity of SARS-CoV-2 genetic material by analysing the genetic code of the virus in samples detected in our country by next generation sequencing methodology (NGS) followed by correlation of virus mutations with clinical laboratory parameters.

In order to maintain public health, but also to maintain the patients' health, especially with neurological diseases, **NKUA (A' and B' Neurological Clinic) took the initiative for organizing and operating a support programme for patients with neurological diseases, as well as for the carers and their families.** The programme includes a Helpline for patients with neurological diseases, and a website posting information about patients with neurological diseases during the pandemic, as well as general health information, and access to services offered online, such as e.g. exercise at home. Through the hotline, patients and their carers can get in touch with a team of healthcare providers. The goal is to provide adequate help to patients with chronic neurological diseases, but also not to further burden the health system in these difficult times. In addition, in the B' Neurological Clinic of NKUA, an outpatient clinic has been set up treating the neurological complications of Covid-19.

To deal with the psychosocial effects of the pandemic, the A' NKUA Psychiatric Clinic took a series of initiatives and actions adapted to the needs of the crisis with the organization and operation of a Psychiatric and Psychosocial Support Line 2107297957 almost immediately after March 10, 2020. The Line operated 7 days a week, from 10:00 to 20:00 and then transformed into 10306, addressing a larger audience.

What is more, to better support our fellow citizens, NKUA (A' Psychiatric Clinic) has organized **two volunteer support groups**: firstly, the “[I] **Stay home with help**” group for supporting individuals who feel isolated and are not in contact with friends or family, and secondly, the group “**Reducing stress together**”, for supporting individuals struggling with stress disorders. Both teams were particularly helpful in contributing to the work done by the Helpline. There was also cooperation with other Helplines, such as the Suicide Prevention Helpline 1018, the SOS Domestic Violence Helpline 15900 and many more. Many mental health clinics also participated in the project, with the notable mention of AMKE IASIS, a psychiatric clinic specializing in at-home care, where several cases from Attiki were referred to.

NKUA participates in a wide range of research programmes aimed at studying the psychosocial impact of COVID-19 in Greece, as well as compiling a list of Instructions, both for use by the public and for specialized use by Mental Health professionals. These instructions focus on treating patient concerns and subsequent community stress and on dealing with stress in children and adolescents through Mental Health Notices on mental health and the psychosocial aspects of COVID-19.

A great contribution to the project has been the **volunteer work by Senior students of the Medical School** and by students in previous years of their studies, who applied for participation in COVID-related programmes of the NKUA. All of them received rigorous training in Personal Protective Measures and in handling patients with SARS-CoV-2. Additionally, depending on their year of studies, their interests and their choice, they were assigned duties, supervised by professors practicing task-shifting (assigning tasks to individuals of lower specialization level).

The A' Preparatory Pathology NKUA Clinic in collaboration with the Hellenic Diabetic Society wrote instructions for protecting people with diabetes from the new coronavirus and organized telemedicine services to provide guidance to people with diabetes mellitus, on the treatment of acute complications of the disease, in people infected with the new coronavirus but remaining at home, and vaccination instructions.

The participation of NKUA members in international research studies is also significant (see publications in section "NKUA Research on covid-19"). The Studies among others include:

- A Greek Study in collaboration with the USA National Cancer Institute with results on patients treated for COVID-19 who have higher antibodies titration against SARS-CoV-2. A multi-centre study examined 259 people who had recovered from COVID-19 infection and participated in plasma donation to patients with coronavirus disease.
- A Kinesics study of SARS-CoV-2 antibodies and immune cell subpopulations in volunteers receiving the BNT162b2 vaccine or other approved SARS-CoV-2 vaccine

- A Clinical study with Plasma Infusion from Recovering Patients for Treatment of Covid-19 Infection.

Multi-centre Study, Phase II.

- Clinical studies with Interleukin-1 Inhibitor (Anakinra) in Patients with Respiratory Impairment from COVID-19 Infection (SAVE, SAVE- MORE)
- GRECCO-19 Clinical Study investigating the effect of colchicine on hospitalized patients with COVID-19
- An Adaptive COVID-19 Treatment Trial Clinical Study, an adaptive, randomized, double-blind, test-controlled team trial evaluating the safety and efficacy of innovative therapeutic agents in hospitalized adults with COVID-19. The study is a multi-centre trial conducted in 75 clinics worldwide.
- Seroepidemiological studies of anti-SARS-CoV-2 antibodies in health professionals and members of NKUA
- Prospective studies regarding the use of a variety of new biomarkers for the prognosis and outcome of various forms of SARS-CoV-2 infection.
- A Retrospective study of adherence to immuno-suppressive therapy in patients with rheumatic diseases during the first wave of the pandemic.
- Retrospective study of the course and outcome of patients with and without diabetes mellitus in the context of the current pandemic – in collaboration with the National Public Health Organization (E.O.Δ.Υ).
- A prospective multi-centre study on the outcome of patients with diabetes mellitus who are hospitalized with COVID-19.
- A prospective study of antibody titer after vaccination in people with and without diabetes mellitus.
- A study on the correlation between telomere length and clinical and laboratory characteristics, as well as the outcome in people with COVID-19.
- A study of the genetic diversity of SARS-CoV-2 strains characterization, of the genetic diversity rate in different samples of the same patients and of the course of genetic diversity phenomena during the evolution of the pandemic at different times.
- Studies on complex immune disorders in patients with severe SARS-CoV-2 infection
- International multi-centre study for developing guidelines related to reliable genotypic analysis of the SARS-CoV-2 virus.
- Study of the renin-angiotensin system in patients with COVID-19.
- Studies on SARS-CoV-2-related anosmia.

- Studies on mental health during the SARS-CoV-2 pandemic
- Studies on the effects of SARS-CoV-2 pandemic on the work of various medical specialties
- Studies on differences in the impact of cardiovascular diseases that need treatment and their epidemiology during the pandemic period
- A HOPE study, which is the Greek branch of the international CRISIS survey, investigating the effects of the COVID-19 pandemic on child and adolescent health.

Finally, NKUA is conducting a large seroepidemiological survey for the detection of antibodies against the new coronavirus. So far, the results of the study show that only half of those infected have had symptoms of the disease, while one third did not even suspect an infection.

The study is the result of a great and concerted effort by the National and Kapodistrian University of Athens. It was carried out between June and November 2020 to 5,000 volunteer NKUA members (undergraduate and postgraduate students, professors and Emeritus professors, scientific cooperators, researchers and administrative staff) aged 18-82 (35% of them were men) and tested for the presence of antibodies against the new SARS-CoV-2 coronavirus. Among the 5,000 examined volunteers, 1.6% were detected positive for antibodies, while the monthly prevalence of antibodies was in line with the cumulative number of cases in Greece during the corresponding period. Among the members of the various Schools, the highest percentage of seropositive individuals (1.95%) was found in the School of Health Sciences, as expected.

Assessing the prevalence of antibodies made use of approved methods detecting total antibodies (IgG, IgM and IgA; panIg) against SARS-CoV-2 protein N as well as special antibodies against external protein S receptor-binding domain (RBD). What is interesting is that a high proportion (49%) of seropositive individuals were completely asymptomatic, that is, almost half of the people who had developed antibodies against SARS-CoV-2. They were all professionally active citizens and even though they were infected with coronavirus over the previous months, they did not show any symptoms indicative of SARS-CoV-2 infection (fever, muscle pain, hardship, headache, conjunctivitis, sweating, coughing, dyspnea, anosmia, lack of taste). It is worth noting that two meta-analyses of all the studies published up to July 2020 indicate that the average rate of asymptomatic infections does not exceed 20%.

Moreover, 33% of the seropositive individuals did not suspect that they were exposed to the virus, nor did they contact a confirmed case. Last but not least, the levels of antibodies of asymptomatic cases were found to be comparable with symptomatic cases, irrespective of the individual's age and sex.

ACTION NKUA DEPARTMENTS TOOK IN THE COVID-19 PANDEMIC CRISIS

MARCH 2020-FEBRUARY 2021

The institution's various Departments and Units made every effort and took initiatives, in parallel with the work of Medical School, the research and the action of the Administration for the operation of NKUA in the COVID-19 pandemic crisis.

The National and Kapodistrian University of Athens has dealt with sewage epidemiology, as it is a valuable contributor in the fight against COVID-19. It developed a protocol for measuring viral load in wastewater and a statistical predictive model to calculate the actual number of patients (symptomatic and asymptomatic patients) on a daily basis, in order to establish a system, warning the Competent Authorities timely and reliably. This would result in preventing and reducing the disease in a non-invasive way and adopting appropriate measures/restrictions at the right time. Sewage epidemiology is complementary to screening tests and cannot replace them. It is impossible to test the whole population, thus, there is an urgent need for a reliable means for detecting the larger scale of disease prevalence in real time, even in communities potentially considered sources of the infection.

At the onset of the pandemic and the urgent need for medical supplies, NKUA (Laboratory of Physiology and Laboratory of Advanced Constructions and Intelligent Systems) took immediate action by designing and constructing relevant equipment (face shield / mask / specialized equipment) using 'Medical 3D Printing' technology and by undertaking and coordinating relevant initiatives in the country, as well as investigating and implementing proposals. In this context, the University immediately responded to the need for help to the University Clinics and certain Public Hospitals by creating protection masks and the first Greek line of production of sanitary emergency healthcare material. At the same time, it designed and "printed" the first fully customizable breathing mask from biocompatible and sterilizable materials (Physiology Lab).

The Ministry of Health and the Organization of Assuring Quality in Health (Ο.ΔΙ.Π.Υ.) in collaboration with the School of Medicine and the Department of Nursing, NKUA, developed an innovative distance asynchronous learning programme entitled "Latest Scientific Developments for effective clinical management of the COVID-19 pandemic". The purpose of the programme is reinforcing the training of doctor, nurse and other healthcare professionals, in the public or private sector, so as to ensure a more qualitative and effective care, according to modern elaborated knowledge, by updating knowledge and skills (additional info on <https://covid19.cce.uoa.gr/>).

Meanwhile, the MSc "Global Health – Disaster Medicine", in collaboration with the Department of Emergency Medicine of the University La Verne (Switzerland), created

an online platform for training, informing and conversing with the academic community, regarding COVID-19. Additionally, the Nephrology and Renal Transplant Clinic conducted a study for assessing the spread and collective immunity of SARS-COV-2 in hospital and general population. It also made a proposal, which the Ministry of Health adopted, in regards to managing patients with final-stage chronic renal disease, on dialysis, peritoneal dialysis and renal transplant, during the pandemic. Moreover, it published a paper entitled “COVID-19 and solid organs transplant”. The B’ University Clinic of Anaesthesiology suggested guidelines–recommendations on anaesthetically managing COVID-19 cases and they contain algorithms, checklists and management protocols. Pharmaceutics Department’s research group contributed to epidemiological research on the effectiveness of preventive and curative measures for the new COVID-19 disease symptoms in the Greek population.

Furthermore, NKUA’s Laboratory of Law and Informatics has taken on data protection responsibilities for the National Public Health Organization (E.O.Δ.Υ.) and ensured its compliance with the General Data Protection Regulation. Also, the Laboratory conducted impact assessment research on issues related to remote education for the Ministry of Education and Religious Affairs, and advised the Ministry of Digital Governance on issues related to remote digital public services and their provision to the citizens. It also advised a committee of the Ministry of Justice – on remotely issuing and delivering court decisions.

Finally, NKUA (MSc in “Global Health – Disaster Medicine”), in cooperation with the School of Medicine of the Aristotle University of Thessaloniki, has supported actions of the NGO “Doctors of the World” and collaborated with the National Centre for Emergency Care (EKAB) by organizing open educational presentations on pre-hospital management of patients with COVID-19. Also, NKUA has supported the E.O.Δ.Υ. call-centre by allocating students and graduates of the University for its needs, as well as it implemented a simulation exercise for responding to a large patient inflow during the COVID-19 outbreak at the Emergency Unit of the Attikon University Hospital. Likewise, the Department of Nursing has published a leaflet for students of the University, on stress management during the pandemic, and provided information on stress management to nurses who work at the forefront of COVID-19 crisis.

From the onset of the pandemic, NKUA has been offering voluntary healthcare and humanitarian support to citizens of the country and, particularly, to members of vulnerable groups.

In this context, NKUA has issued guidelines to professors and students with disabilities and, particularly, to deaf and hard of hearing individuals, to ensure their access to remote education and remote examination, it has also issued guidelines for addressing special educational needs during the pandemic (Speech and Accessibility Laboratory and Special Needs Education and Family Counselling Laboratory).

NKUA has also conducted research to investigate changes in the students' emotional involvement and interactions during the compulsory transition to distance learning due to the special circumstances (Department of Chemistry).

Our University has also offered educational programmes of evaluative psychosomatic counselling, aiming towards psychosomatic resilience and functionality enhancing. At the same time, the University has collected and uploaded information material for psychosocial support on the coronavirus and the effects of the pandemic.[Centre of Psychosomatic Health Assessment Research (KEAMΨΥ) – Laboratory of Canon Law - Department of Social Theology and Religious Studies].

NKUA organized actions for protecting and psychologically supporting the elderly and school communities in the context of the pandemic, for strengthening Physical Education professors' work in Special Needs education units, as well as for associating theatrical art with medicine through an online programme. NKUA has authored several proposals for families of children and adolescents with disabilities or special educational needs, with a view to improving their stay-home period due to the pandemic. On a par, it implemented educational activities for raising awareness to autism spectrum disorder and Covid-19 disease.

Through constant information dissemination and support of the university community and the public in general, NKUA has organized several online lectures, workshops, seminars and discussions, which address a wide range of topics, always related to the pandemic, such as by, Covid-19: Clinical Practice & Medical Research, Covid-19 and its impact on transplanting, Covid-19 and Vascular Thrombosis, WHO (World Health Organization) in the time of the pandemic, Research and integrity in Europe during the pandemic, Civil Society and Refugee Flows, Trauma and Mourning, Science, Technology, Pandemic: An Approach from the Humanities and Social Sciences, Humanitarian Challenges and Covid-19, Divine Communion and the Coronavirus, Breastfeeding and Covid-19 and others.

Moreover, it conducted studies on the Covid-19 effects on small and medium-sized enterprises in Greece and Europe, as well as on red loans in the Greek banking system related to the pandemic (Centre for Financial Studies of the National and Kapodistrian University of Athens (KEMEX)), and conducted research on fears and opinions of internet users on public figures and institutions in the management of emergency situations in our country (Laboratory of Journalistic Studies and Communication Applications, Education and Mass Media of the Department of Communication and Media Studies).

Finally, with the closure of museums and home confinement, NKUA developed the concept of a different, virtual museum by creating two different collections of photos and narratives, on Facebook and Instagram respectively, with an impressive citizen participation (School of Philosophy).

**RESEARCH OF THE NATIONAL
AND KAPODISTRIAN UNIVERSITY
OF ATHENS ON THE COVID-19 PANDEMIC**

MARCH 2020 - FEBRUARY 2021

The contribution of the National and Kapodistrian University of Athens at the national level was significant in terms of scientific publications on COVID-19, according to the updated data from the National Documentation Centre (EKT).

Actions managing, preventing and controlling COVID-19 disease presuppose and are based on continuously monitoring relevant scientific discoveries, as new research outcomes are constantly published at a rapid pace. For scientists, the pandemic has been an extremely rare opportunity, but also an unprecedented challenge, combining a wide range of scientific disciplines.

Research contributions by Greek academic institutions, as presented by the Greek National Documentation Centre (EKT, hereafter), involving COVID-19, also show a significant contribution of NKUA in this field.

More specifically, during the period from 1 January to 21 December 2020, according to the EKT survey, NKUA, is first on the list of contributors, with a total contribution of 37.8% of the total scientific publications. This analysis utilizes the index of evaluated publications of Web of Science (WoS) by Clarivate Analytics (Ioanna Sarantopoulou, "The scientific production on COVID-19 and the participation of Greece", <https://www.ekt.gr/el/news/25249>, 22.12.2020).

The current performance of the National and Kapodistrian University of Athens (vs. other institutions) is increased, in relation to the corresponding previous analysis of EKT, where the contribution of NKUA corresponded to 36.44% of all relevant publications of the country's institutions (Ioanna Sarantopoulou, "Scientific production on COVID-19. A bibliometric analysis", published in the journal *Innovation, Research & Digital Economy*, Autumn 2020, issue 119).

Since the beginning of the pandemic, EKT has systematically documented several additional dimensions of the topic. It has, for example, drafted a special edition on the impact of the pandemic on the research orientation of young Greek researchers [EKT (2020), *COVID-19 and young Greek researchers. The impact of the pandemic on their research activity*. Athens: National Center for Documentation and Electronic Content].

In examining the Greek participation in the scientific research for the COVID-19 pandemic, in the examined period, research traced 683 relevant publications, which emerged from the collaboration of 4,778 authors from Greece and abroad, with Greece ranking 27th out of a total of 207 countries.

In total, the publications for COVID-19 with the participation of Greek scientists, received 6,165 citations from other works, with an average of 9.03 citations per pub-

lication, while the h-index (bibliometric index of scientific quality) for the total works amounts to 37.

Regarding scientific journals, 17 articles (i.e. 2.4% of the total number of papers) were published in *Experimental and Therapeutic Medicine*, 9 articles (1.3%) in the *Hellenic Journal of Nuclear Medicine* and 9 articles (1.4%) in the *International Journal of Environmental Research and Public Health*. In total, 60 articles (9.6%) have been published in journals in Greece. Publications in open access journals amount to 599 (i.e. 88% of the total).

Greek scientists cooperated with scientific teams and experts from 99 different countries. Five countries with whom NKUA scientists cooperated the most, in terms of the number of papers that have been published in collaboration were Italy (23%), the USA (22%), England (20%), Germany (14%) and Spain (13%).

The National and Kapodistrian University of Athens ranks first among the Greek institutions with the majority of publications (a percentage of 37.8 % of publications). NKUA is followed by the Aristotle University of Thessaloniki (14.4%), the University of Thessaly (10.4%), the University of Patras (9.6%) and the University of Crete (9.1%).

Processing the thematic scientific areas and keywords shows that the research conducted by Greek scientists and their international networks largely covers a wide range (74.6 %) of scientific fields of Medicine and Health Sciences. Sixty-two percent of the published papers fall into the category of Clinical Medicine, most of which refer to internal medicine and general medicine, diagnostic methods in cardiovascular diseases and lung diseases. Up to 13% of the publications are part of the large topic which includes basic medicine and more specifically immunology and pharmaceutical and non-pharmaceutical interventions. The rest of the publications relate to medical research and experimental medicine on COVID-19 (up to 9%), to public and environmental health, workplace health, politics for health and services, etc.

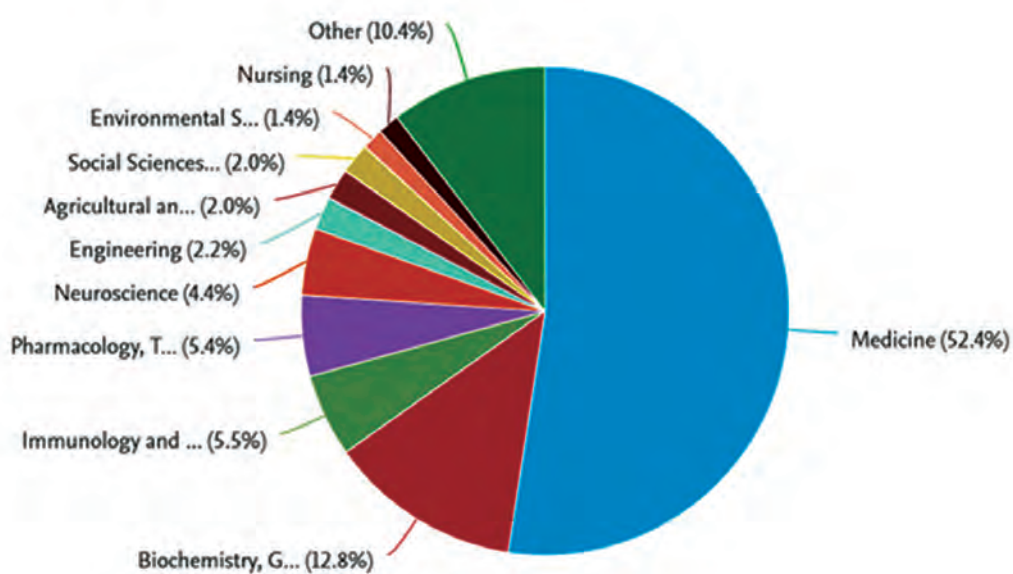

A percentage of 13.7 % of the publications relate to Natural Science research on COVID-19, mainly environmental sciences (20%), biochemistry and molecular biology (14%), virology (11%), microbiology (13%) and interdisciplinary applications of computer science and mathematics. The research results of the above sciences deal with preventing, controlling through the use of smart technologies, diagnosing, preventing and analyzing the pandemic.

The spread of the pandemic has also been the subject of researchers in the Social Sciences (6.3% of publications), mainly on the environmental impact of the pandemic, human psychology and behaviour, tourism and the economy. They are followed by Engineering and Technology (4.6%) and the Humanities (0.4%) with research in philosophy, religion and the arts in the context of the COVID-19 crisis.

In particular, in the SCOPUS bibliographical database, until February 28, 2021, the following NKUA research is recorded, exclusively by NKUA or with the participation of it:

- 427 publications in international scientific journals.
- Of these 334 publications in 2020 and 93 in 2021.
- This work has already received 5,347 citations in the international literature, with h-index 25!

Documents by subject area

(APPENDIX). A numerical representation of publications with the participation of NKUA members appears below.
